

FINANCE AND TREASURY TRAINING

Asset and Liability Management

5 day course

Classroom, online or in-house

Course overview

Asset and liability management is where a balance sheet's structural risks are identified and managed: mismatches in maturity, repricing, currency and liquidity that do not appear in a profit statement until they cause a problem. This course covers the discipline for banks and other balance sheet intensive institutions. Delegates work through gap analysis, duration and interest rate sensitivity, liquidity risk and the funding profile, currency mismatch, funds transfer pricing, and the governance of an asset and liability committee. Regulatory requirements including liquidity ratios are covered, with attention to the market conditions of African banking where funding is shorter and less stable than the models assume.

What you will learn

- Construct and interpret a maturity and repricing gap analysis
- Apply duration and interest rate sensitivity measures
- Assess liquidity risk and the stability of a funding profile
- Analyse currency mismatch and its management
- Explain funds transfer pricing and its behavioural effect
- Meet regulatory liquidity and capital requirements
- Run an effective asset and liability committee

Who should attend

- Treasury and asset and liability management professionals
- Bank finance and risk staff
- Asset and liability committee members
- Regulators and supervisors
- Internal auditors covering treasury
