

MAINTENANCE MANAGEMENT TRAINING

Asset Management Systems and ISO 55000

3 day course

Classroom, online or in-house

Course overview

Asset management is often equated with maintenance, when the standard is about aligning what an organisation does to its assets with what it is trying to achieve, across the whole life from acquisition to disposal. This course covers that wider discipline. Delegates work through the structure of the standard, the strategic asset management plan and how organisational objectives translate into asset objectives. Asset registers, criticality and the data that everything else depends on follow. Whole life costing and the acquisition decision that determines decades of operating cost are covered. Risk, performance measurement and the balance between cost, risk and performance are addressed as the central trade off. Decision making for renewal, refurbishment and disposal is covered. The course closes on maturity assessment, certification and on the line management ownership without which none of it operates.

What you will learn

- Translate organisational objectives into asset objectives
- Build a strategic asset management plan
- Maintain asset registers, criticality and the underlying data
- Apply whole life costing to acquisition decisions
- Balance cost, risk and performance explicitly
- Decide on renewal, refurbishment and disposal
- Assess maturity, pursue certification and secure line ownership

Who should attend

- Asset managers and asset management system owners
- Infrastructure and utility engineers
- Maintenance and reliability managers
- Capital planning and finance professionals
- Quality and compliance officers

Course outline

- 01 More than maintenance
- 02 Structure of the standard
- 03 Strategic asset management plan
- 04 Asset registers and criticality
- 05 Data as the foundation
- 06 Whole life costing and acquisition
- 07 The cost, risk and performance trade off
- 08 Renewal, disposal, maturity and ownership
