

PROJECT AND CONTRACT MANAGEMENT

Contractor Safety Management

3 day course

Classroom, online or in-house

Course overview

A large share of serious incidents happen to contractors, often on sites where the client believed safety had been transferred with the contract. This course covers managing that properly. Delegates work through the legal position and where duty actually sits, contractor prequalification and the selection criteria that predict safety performance, and the contractual safety requirements that can be enforced. Induction, permit interfaces and supervision are covered, along with monitoring contractor performance while work proceeds. Incident investigation involving a contractor is addressed, including the awkward questions of control and instruction. The course closes on managing multiple contractors working simultaneously.

What you will learn

- Explain where legal duty sits when contractors are engaged
- Prequalify contractors against criteria that predict safety performance
- Write safety requirements into a contract so they can be enforced
- Run induction, permit interfaces and supervision
- Monitor contractor safety performance during the work
- Investigate an incident involving a contractor
- Manage simultaneous operations by multiple contractors

Who should attend
