

HEALTH, SAFETY AND SECURITY TRAINING

Environmental Management Systems and ISO 14001

5 day course

Classroom, online or in-house

Course overview

Environmental performance is increasingly a licence condition, a lender requirement and a customer question, and a management system is what turns intentions into evidence. This course covers building one. Delegates work through the structure of the standard, identifying environmental aspects and evaluating their impacts, and the compliance obligations register that underpins the system. Objectives, operational controls and the management of significant aspects follow. Monitoring, measurement and the data that supports a claim are covered, since environmental claims attract scrutiny. Emergency preparedness for environmental incidents is addressed. The course closes on internal audit, management review, certification and the life cycle perspective the standard requires.

What you will learn

- Describe the structure of the standard and how its clauses connect
- Identify environmental aspects and evaluate their impacts
- Build and maintain a compliance obligations register
- Set objectives and operational controls for significant aspects
- Monitor and measure so environmental claims can be evidenced
- Prepare for and respond to environmental incidents
- Run internal audit and management review, and apply a life cycle perspective

Who should attend

- Environmental managers, officers and coordinators
- Safety and quality practitioners running integrated systems
- Internal auditors covering environmental management
- Operations managers with environmental obligations
- Consultants implementing management systems

Course outline

- 01 Intentions against evidence
- 02 Structure of the standard
- 03 Environmental aspects and impacts
- 04 Compliance obligations register
- 05 Objectives and operational controls
- 06 Monitoring, measurement and evidence
- 07 Environmental emergency preparedness
- 08 Audit, review, certification and life cycle perspective

Upcoming dates
