

PROJECT AND CONTRACT MANAGEMENT

EPC Contracting and Project Delivery Models

5 day course

Classroom, online or in-house

Course overview

The delivery model chosen for a capital project fixes who carries which risk and how much visibility the owner retains, and it is usually decided before anybody has analysed the consequences. This course makes that decision deliberate. Delegates work through the main models, from traditional design bid build through engineering procurement construction to management contracting and alliancing, and the risk profile of each. Lump sum turnkey arrangements receive detailed attention, including where the premium goes and what the owner gives up. Interface and split scope risk are covered. The course closes on selecting a model against project characteristics and market conditions.

What you will learn

- Compare the main delivery models and their risk profiles
- Analyse what a lump sum turnkey arrangement actually buys
- Identify where risk premium sits in a price
- Assess the visibility and control an owner retains under each model
- Manage interface and split scope risk
- Match a model to project characteristics and market conditions
- Structure the contract to support the chosen model

Who should attend

- Owner and client project managers
- Contract and commercial managers
- Procurement staff on capital projects
- Engineering and construction managers
- Executives approving capital delivery strategy

Course outline

- 01 Delivery model as a risk decision
- 02 Design bid build and traditional models
- 03 Engineering, procurement and construction
- 04 Lump sum turnkey and its premium
- 05 Management contracting and alliancing
- 06 Interface and split scope risk
- 07 Owner visibility and control
- 08 Selecting and structuring the model
