

CYBERSECURITY AND IT TRAINING

Implementing an Information Security Management System to ISO/IEC 27001

5 day course

Classroom, online or in-house

Course overview

Certification to the information security standard is increasingly demanded by customers and lenders, and organisations commonly pursue it by writing policies that describe an organisation they do not have. This course covers building the real thing. Delegates work through scope definition and why an overly broad scope sinks a first certification, the risk assessment and treatment process that drives every control decision, and the statement of applicability that records it. Control selection is covered against the annex, with the justification each inclusion and exclusion requires. Documented information, competence and awareness follow. Internal audit, management review and corrective action are addressed. The course closes on the certification audit and on operating the system afterwards.

What you will learn

- Define a scope that can actually be certified
- Run risk assessment and treatment to drive control decisions
- Produce a statement of applicability with defensible justification
- Select and implement controls proportionate to the risk
- Maintain documented information, competence and awareness
- Run internal audit, management review and corrective action
- Prepare for the certification audit and operate the system afterwards

Who should attend

- Information security managers and officers
- IT managers and system owners
- Compliance, risk and quality staff
- Internal auditors covering information security
- Consultants implementing management systems

Course outline

- 01 Policies describing an organisation you do not have
- 02 Scope definition and its consequences
- 03 Risk assessment and treatment
- 04 The statement of applicability
- 05 Control selection and justification
- 06 Documented information, competence and awareness
- 07 Internal audit and management review
- 08 Certification audit and ongoing operation
