

PROJECT AND CONTRACT MANAGEMENT

Project Management for Auditors

5 day course

Classroom, online or in-house

Course overview

Auditing a project requires understanding how one is supposed to work, and most project audit findings are weak because the auditor tested paperwork rather than delivery. This course closes that gap. Delegates work through the project life cycle and the controls proper to each phase, then the audit approach for each: governance and business case, estimating and baseline integrity, procurement and contract award, progress reporting and earned value, change control, and close out. The course covers the warning signs that a project is failing before the reports admit it, and closes on writing findings that a project team accepts rather than resists.

What you will learn

- Describe the project life cycle and the controls proper to each phase
- Audit governance, business case and benefits realisation
- Test estimating assumptions and baseline integrity
- Audit procurement, award and contract administration
- Test progress reporting and earned value for inflation
- Audit change control and the final account
- Recognise the early warning signs of a failing project

Who should attend

- Internal auditors covering capital projects
- External and government auditors
- Risk and assurance professionals
- Project governance and PMO staff
- Finance staff overseeing capital spend

Course outline

- 01 How a project is supposed to work
- 02 Auditing governance and the business case
- 03 Estimating assumptions and baseline integrity
- 04 Auditing procurement and award
- 05 Testing progress reporting and earned value
- 06 Auditing change control
- 07 Final account and close out
- 08 Early warning signs and writing findings
