

PROJECT AND CONTRACT MANAGEMENT

Project Quality Management and Inspection

3 day course

Classroom, online or in-house

Course overview

Quality on a project is either built into the sequence of work or inspected for afterwards at far greater cost, and organisations that rely on final inspection are paying to find defects rather than to prevent them. This course covers building it in. Delegates work through the quality plan and its relationship to the specification, inspection and test plans with hold and witness points that actually stop work, and the qualification of suppliers and subcontractors before award. Documentation including certificates, test records and the data book handed over at completion is covered. Non conformance, concession and rework decisions follow. Auditing during execution is addressed. The course closes on quality at handover and on the defects that surface in the liability period.

What you will learn

- Build a quality plan from the specification
- Write inspection and test plans with effective hold and witness points
- Qualify suppliers and subcontractors before award
- Assemble certificates, test records and the handover data book
- Manage non conformance, concession and rework decisions
- Audit quality during execution rather than after it
- Manage quality at handover and through the defects liability period

Who should attend

- Project quality managers and engineers
- Inspection and expediting personnel
- Project and construction managers
- Procurement staff qualifying suppliers
- Client representatives accepting work

Course outline

- 01 Preventing defects against finding them
- 02 The quality plan and the specification
- 03 Inspection and test plans
- 04 Hold and witness points
- 05 Supplier and subcontractor qualification
- 06 Certificates, records and the data book
- 07 Non conformance, concession and rework
- 08 Auditing, handover and defects liability
