

GOVERNANCE, RISK AND COMPLIANCE

Project Risk Management and Compliance

5 day course

Classroom, online or in-house

Course overview

This course covers risk management on projects, where the exposure is concentrated in decisions made early and the consequences appear late. Delegates work through risk identification and the biases that distort it, qualitative and quantitative assessment including schedule and cost risk analysis, response planning, contingency setting and its justification, and the monitoring that keeps a risk register from becoming a document nobody opens. Compliance obligations on projects are covered specifically, including permits, environmental and social requirements and the reporting expected by lenders and development finance institutions.

What you will learn

- Identify project risks and counter the biases that distort identification
- Apply qualitative assessment and prioritise credibly
- Carry out quantitative schedule and cost risk analysis
- Plan responses and assign genuine ownership
- Set and justify contingency to a sponsor or lender
- Track permits, environmental and social compliance obligations
- Keep a risk register that is actually used during delivery

Who should attend

- Project and programme managers
- Project risk and controls professionals
- Engineers and technical leads on capital projects
- Sponsors and steering committee members
- Lender and development finance institution staff

Course outline

- 01 Risk identification and the biases that distort it
