

SAP SYSTEMS TRAINING

SAP Data Migration and Cutover Management

3 day course

Classroom, online or in-house

Course overview

Data migration is the activity most likely to delay a go live and the one most often left to the end, and a system loaded with bad master data is unusable regardless of how well it was configured. This course covers doing it properly. Delegates work through migration scope and the decision of what to bring, source data profiling and the cleansing that follows, and mapping and transformation rules. Load tools and techniques are covered. Reconciliation and sign off receive full attention, since somebody must accept that the loaded data is correct. Cutover planning, sequencing and the rehearsal that proves the plan follow. The course closes on go live support and post migration correction.

What you will learn

- Define migration scope and decide what data to bring
- Profile source data and plan cleansing
- Build mapping and transformation rules
- Select and use load tools and techniques
- Reconcile loaded data and obtain business sign off
- Plan and sequence cutover, and rehearse it
- Support go live and correct post migration errors

Who should attend

- Implementation project managers and team leads
- Data migration analysts and consultants
- Business process owners accepting migrated data
- Master data managers
- IT staff supporting an implementation

Course outline

- 01 The activity most likely to delay go live
- 02 Migration scope and what to bring
- 03 Source data profiling
- 04 Cleansing and enrichment
- 05 Mapping and transformation rules
- 06 Load tools and techniques
- 07 Reconciliation and business sign off
- 08 Cutover planning, rehearsal and go live support
